Learn to open your engine bonnet and have idea about what you will see when the bonnet is open.

If you open your bonnet front to your mechanic, that mean you giving right demonstration to your auto repair shop to change the way what he thinks about you during service procedure. You need to practice and learn how to open your engine bonnet.

When your bonnet is open take your time and look at around your engine and get familiar. You will see removable plastic covers. Fluid reservoirs are clearly labeled and marked. Your owner's manual has a detailed break down of the location of these critical fluid locations and instructions on how to confirm proper levels.

Find your **washer fluid, power steering fluid, brake fluid; radiator and oil engine cap, oil dipstick, transmission fluid dipstick** if you driving an **automatic transmission** and your **battery**.

And lastly, if you wouldn't mind, (and I'm certainly very appreciative if you can), would you mind giving this post a shout out to your friends on Facebook, Twitter, or +1? Just doing what I can to give some solid content to the community, anything you can do in return is always appreciated !
